is our passion
BIODEGRADABLE
BALLOON

ABOUT US

Lufi Expressz Ltd. features top quality products that give every business a competitive edge.
We sell and deliver a wide selection of balloons and accessories to assist your business in promoting products and events. Our family-run company was founded in 1982 and quality has been top priority for us ever since.
Lufi Expressz's unique printing technology enables any complex colorful corporate logos or artworks to be printed on latex balloons.

- **high precision silkscreen printing** up to 8 spot colors or CMYK + 4
- environmentally friendly **biodegradable** latex balloons
- 81 available balloon colors
- large printing area
- wide range of colors, sizes and all kinds of balloon accessories
- short delivery time
- hundreds of satisfied returning clients from Dubai to Canada
- helpful, creative and flexible assistance

If you are looking for something sophisticated combined with a cheap but striking advertising tool, high precision silkscreen balloon printing is the answer.

Our printed balloons are known for their high quality, consistency, reliability – available in several sizes, colors and various printing options.

All balloons and accessories are in conformity with the requirements of the latest International Toy Safety Regulations.

PRODUCTION

HIGH PRECISION PRINTING

CMYK uses halftones of the colors Cyan, Magenta, Yellow and Key (Black) layered on top of one another to create new colors. For example, by using halftones of magenta we can create pink, and if this is then layered on top of halftones of yellow we can create red. By using this process, all colors of the rainbow can be printed. This is why CMYK is often referred to as 'Full Colour Process'.

	Silkscreen printing	High precision silkscreen printing
Accuracy of print	2-3 mm	< 1mm

Even images with extremely fine screens and color registration can be printed in this technique in CMYK. This is not possible in the normal silkscreen printing. High precision printing is a more time-consuming technology than the standard silkscreen print, therefore it is more expensive. Using this technology we can print grids and color gradations and reproduce your logo on a CMYK basis virtually identical to the original one, in up to 8 spot colors or even a photo realistic balloon is possible.

GENERAL INFORMATION

Extra large printing surface, marvellous printing result, bright colors, perfect register on latex balloon. Ideal for promotional purposes or long lasting decorations. Latex balloons can be custom printed in up to 8 colors or CMYK, designs on 1 or 2 sides, with the same or different artworks.
The final offer can only be prepared in view of the logo and we start production only after the artwork has been approved.
Our printing technology represents the highest quality available today. However, it is highly important to bear in mind that the flexible (coloured) latex is not a white sheet of paper. Latex has its natural limits so exactly the same printing quality as on paper should not be expected.
Pantone ink colors are available for orders over 5000 pcs.
For spot color prints we need the logo in vector format (eps, ai, cdr...).
All the images in the catalogue are photos of our real printed balloons, no Photoshop has been used.

MOQ

1-color prints: 100 pcs
2-color prints: 500 pcs
3-8 spot colors and CMYK: 1000 pcs

PACKAGE

Standard packaging: 100 or 500 pcs / polybag.
Special packaging (even with header cards) is available – may have additional cost.

STORAGE

The balloons made of pure latex can be stored for 1-2 years. It is best though to store them in a dark room at a minimum temperature of 15-20°C. In case the balloons have hardened due to storage at low temperatures, they must be preheated sufficiently, until they are soft and flexible again.

Environmentally Friendly Balloons

Our balloons are made of natural rubber and are fully – 100% – biodegradable. The balloon begins it's process of degradation once inflated and this process is accelerated by exposure to environment and to light. Under similar environmental circumstances a latex balloon will decompose within approximately the same time as an oak leaf.

BIODEGRADABILITY

ABOUT THE BIODEGRADABILITY OF LATEX BALLOONS

Balloons are made of **natural rubber latex**, which is tapped from the rubber tree Hevea Brasiliensis. The rubber trees produce a milky sap, which is then turned into latex – a one hundred percent natural substance that should never be confused with plastic. The trees are "tapped" in a similar manner to the extraction of maple syrup – a process which has no harmful impact on the tree's health.

Since rubber trees are grown in plantations rather than their natural rainforest habitat, they help the world's ecosystem. This is because of the amount of carbon sequestration from the environment the trees provide. The rubber production industry is recognised as a **"green industry"**, which is not surprising when you consider that in just one year, the 16 million trees the worldwide balloon industry requires take up over 363 million kilograms of CO_2 gases from the Earth's atmosphere.

In addition, rubber trees are one of the major forms of vegetation in tropical rainforests and as such, are helping to maintain the Earth's ecological balance. Instead of deforesting land in order to raise cattle, people are able to make a better living harvesting latex.

Most balloons are **classed as toys** which come with a very **high level of regulation.** There are many aspects to manufacturing balloons. Our manufacturers are some of the largest in the world and provide products with the highest standards of compliance.

The European balloon industry has undertaken extensive research into the biodegradability of latex balloons. Laboratory tests have shown balloons to biodegrade to approximately 90% within 2 years. Therefore, latex balloons as a product group can be **classed as biodegradable.**

Latex balloons **biodegrade** at about the same rate as other natural materials, such as oak leaves and wood fibres. Balloons are manufactured using **only natural materials,** all of which can be found in their natural state in the environment. Technically speaking, latex balloons are "natural elastomers" (as opposed to synthetic plastic) and will fully disintegrate.

However, like a banana peel, once it is used a balloon is litter. Therefore, it should be composted or disposed of properly in a bin. Similarly, the industry does not condone balloon releases.

Intertek TEST ORDER

Test of balloons and components for migration of certain elements acc. to EN 71 part 3, primary aromatic amines, migration of plasticizers and solvents acc. to EN 71 part 9, N-Nitrosamines and N-nitrosatable substances acc. to EN 71 part 12, Polycyclic Aromatic Hydrocarbons, Phthalates, Tin organic compounds, 2-Mercaptobenzothiazole, Alkylphenols and Alkylphenolethoxylates total content of Cadmium, Lead and Zinc, Latex proteins and Colour fastness to saliva & perspiration.

Summary	**Results**
DIN EN 71-3 (Safety of toys) – Migration of certain elements	***pass***
DIN EN 71-9 (Safety of toys) – Organic chemical compounds- requirements	***pass***
DIN EN 71-12 (Safety of toys) – N-Nitrosamines and N-nitrosatable substances	***pass***
Further requirements	***pass***

ACCESSORIES

electric pump

LA-10

- 380 W
- by pushing the valve, the pump inflates the balloon in a second
- 18×12×16 cm
- 0.9 kg

electric pump

LA-12

- 800 W
- inflates 2 balloons at the same time
- digital timer and speed controller
- pressure controller

electric pump

LA-43

- for 5”-160-260 modeling balloons
- lithium battery and 220 V operation
- 1-2 hours run time
- 1,3 kg

LAGENDA electric pump

LA-45

- 120 W
- professional scaler for 5”-160-260 pendulum balloons
- lithium battery and 220 V operation
- long run time
- full metal body 2,5 kg

LAGENDA electric pump

LA-57

- 800 W
- Semi-professional, precise sizing blow moulder
- different sizes can be set per side
- 2,5 kg
- 220 V

LAGENDA electric pump

LA-46

- 1400 W
- professional sizing blower
- memory sizes
- phone APP
- full metal body
- 220 V

GENERAL TERMS

OUR PARTNERS IN DELIVERY

GENERAL TERMS

The received orders can only be delivered in accordance with our conditions of delivery and payment, despite the customer having his own terms of business, which he may use to form the basis of the order. Exceptions require our written confirmation. The customer accepts conditions of delivery and payment when placing an order. All prices quoted in our offers and pricelists are in EURO or USD, net, VAT not included and are subject to alteration without due notice. Small variations in quantity and quality due to fabrication have to be accepted.
With his order the customer agrees that samples from production may be used for promotional purposes of Lufi Expressz Ltd.
For special fabrications we reserve the right to supply up to 5% more or less of the order quantity.

DELIVERY

All deliveries are ex work. Packing for transportation is included in the sales price. On request we can send the goods by a shipping company of our choice (UPS, FedEx, GLS or our forwarder). In this case the cost for freight (and custom) will be charged additionally to the sales price. Goods travel at the buyer's risk.
We do not take responsibility for delays caused by transport companies.
For additional charges we can offer insurance on shipments for the client's request.

VAT

For deliveries to EU countries we need our client's valid VAT number. Otherwise we have to charge the Hungarian VAT which is currently 27%.

COMPLAINTS

Within 8 days after receipt of the goods. A return privilege only exists if there is prior written agreement. Faulty goods are only replaced, if the reasons for complaint, number and date of the invoice are indicated, and the goods are returned to our warehouse.
